## A. Soldier and Bananas

time limit per test: 1 second

memory limit per test: 256 megabytes

input: standard input

output: standard output

A soldier wants to buy  $w$  bananas in the shop. He has to pay  $k$  dollars for the first banana,  $2k$  dollars for the second one and so on (in other words, he has to pay  $i \cdot k$  dollars for the  $i$ -th banana).

He has  $n$  dollars. How many dollars does he have to borrow from his friend soldier to buy  $w$  bananas?

### Input

The first line contains three positive integers  $k, n, w$  ( $1 \leq k, w \leq 1000, 0 \leq n \leq 10^9$ ), the cost of the first banana, initial number of dollars the soldier has and number of bananas he wants.

### Output

Output one integer — the amount of dollars that the soldier must borrow from his friend. If he doesn't have to borrow money, output 0.

### Examples

<b>input</b>	<a href="#">Copy</a>
3 17 4	
<b>output</b>	<a href="#">Copy</a>
13	

### Codeforces Round #304 (Div. 2)

Finished

Practice

### → Virtual participation

Virtual contest is a way to take part in past contest, as close as possible to participation on time. It is supported only ICPC mode for virtual contests. If you've seen these problems, a virtual contest is not for you - solve these problems in the archive. If you just want to solve some problem from a contest, a virtual contest is not for you - solve this problem in the archive. Never use someone else's code, read the tutorials or communicate with other person during a virtual contest.
