

B. Queue at the School

time limit per test: 2 seconds
 memory limit per test: 256 megabytes
 input: standard input
 output: standard output

During the break the schoolchildren, boys and girls, formed a queue of n people in the canteen. Initially the children stood in the order they entered the canteen. However, after a while the boys started feeling awkward for standing in front of the girls in the queue and they started letting the girls move forward each second.

Let's describe the process more precisely. Let's say that the positions in the queue are sequentially numbered by integers from 1 to n , at that the person in the position number 1 is served first. Then, if at time x a boy stands on the i -th position and a girl stands on the $(i + 1)$ -th position, then at time $x + 1$ the i -th position will have a girl and the $(i + 1)$ -th position will have a boy. The time is given in seconds.

You've got the initial position of the children, at the initial moment of time. Determine the way the queue is going to look after t seconds.

Input

The first line contains two integers n and t ($1 \leq n, t \leq 50$), which represent the number of children in the queue and the time after which the queue will transform into the arrangement you need to find.

The next line contains string s , which represents the schoolchildren's initial arrangement. If the i -th position in the queue contains a boy, then the i -th character of string s equals "B", otherwise the i -th character equals "G".

Output

Print string a , which describes the arrangement after t seconds. If the i -th position has a boy after the needed time, then the i -th character a must equal "B", otherwise it must equal "G".

→ Attention

Package for this problem was not updated by the problem writer or Codeforces administration after we've upgraded the judging servers. To adjust the time limit constraint, solution execution time will be multiplied by 2. For example, if your solution works for 400 ms on judging servers, then value 800 ms will be displayed and used to determine the verdict.
